 - [Delegate Process \(If Applicable\)](#)
- [MS Worker Offboarding Process](#)

Types of Microsoft (MS) Workers & Onboarding Paths at GitHub:

There are several types of MS workers at GitHub, be sure you know which type you're working with so you can follow the correct onboarding process:

1. Check the employee's alias. If the alias begins with the prefix `v-`, they will be MS External Staff. Jump down to the section, "Dual Access Contractor Path"
2. Will this person manage GitHub or other Microsoft employees? If so, they will be either a Microsoft Integrated Employee or MS Embedded Manager. Jump down to the "Zendesk Ticket Path".

3. If neither of these are the case, follow the "Dual Access Employee Path".

Worker Type	Scenario
MS Collaborator** <i>Contingent Worker</i>	Microsoft
MS Associate** <i>Contingent Worker</i>	Microsoft
MS External Staff <i>Contingent Worker</i>	A Microsoft Note: Microsoft
MS GitHub Integrated aka Microsoft Integrated Employee (MIE) <i>Contingent Worker</i>	Microsoft GitHub • C&A • LinkedIn
MS Embedded Manager <i>Employee/Regular</i>	Microsoft

For an Entitlements breakdown of these MS Worker types, please visit [this page in their repo](#).

Please note: Any MS Workers in these categories without end dates will have an automatic end date applied of 90 days from start date. Exceptions to this are MSFT Exec Leaders and MSFT Finance/Accounting team that

**MS Collaborators and MS Associates will need to "report to" a GitHub Sponsor not another MS Collaborator or MS Associate."

Dual Access Onboarding Path: MS Collaborators & MS Associates

Role of GitHub Sponsors to MS Collaborators & MS Associates

- The GitHub Sponsor is responsible for:
 - Updating HR via HR Zendesk as soon as possible if work with the MS Worker concludes prior to the stated end date or if the MS Worker leaves Microsoft.
 - Ensuring the appropriate applications are provided via Entitlements to MS Workers.
 - Completing the Monthly Attestation to verify the MS Worker still needs GitHub Systems and Tools access and, if not, informs HR in a timely manner.

- Worker Type (i.e. MS Collaborator vs MS Associate) is automatically assigned based on the Sponsor's department, and determines a default level of access to GitHub's systems. Therefore, we recommend choosing
 - Choose a sponsor who is close to the work that the employee needs to do, or who manages people doing similar work
 - If the worker type assigned at onboarding is not sufficient, please open an HR Zendesk ticket to request a different worker type.

i Important Note: Before you can start, you will need the Microsoft Alias and PERN (Microsoft ID) of the Dual Access Employee you want to sponsor. You can get this information from the employee's Microsoft manager.

Delegating Sponsor Tasks (for Sponsor's VP+)

- Any senior leader VP and above is able to choose a delegate to perform Dual Access administrative tasks on their behalf.
- This Delegate cannot perform any other manager tasks in Workday, their abilities are limited to the Dual Access Dashboard only.
- **The Sponsor (VP+ leader) maintains responsibility for all DAE staff onboarded by their delegate, including appropriate least privileged access to GitHub systems.**

To learn how to select a delegate for your Dual Access Employee requests, please see [Dual Access Delegation SOP](#)

MS Collaborator & MS Associate Onboarding Data Flow

Four main components to a completed Dual Access Record in Workday:

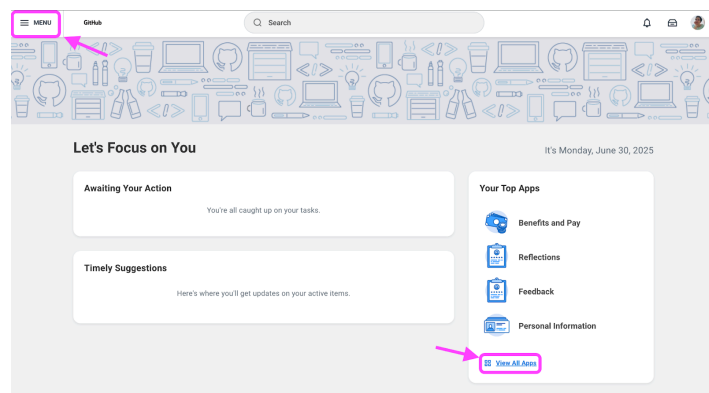

1. [GitHub Sponsor in Workday](#): provides worker's MSFT Alias, ID (ie. PERN), and business justification.
2. **Automation from MSFT HR Data Platform**: Integration runs and brings over to Workday relevant employee data.
3. [MSFT Worker in Workday](#): receives notification to login to Workday and provides GitHub Handle (non-EMU) and associated email address.

Onboarding App in Workday

GitHub Sponsor Steps:

Step 1: Access the Dual Access Dashboard In Workday

- Open Workday from Okta
- Click on **Menu** or **View All Apps**.

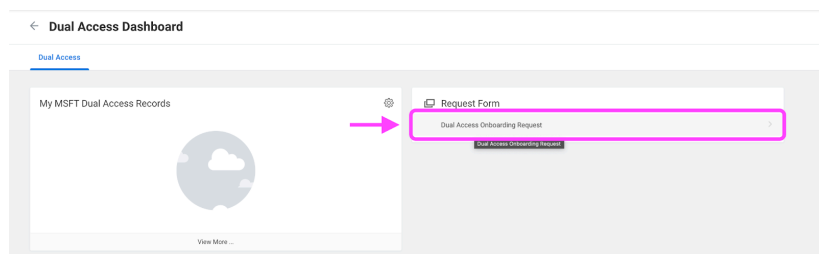

- Select **Dual Access Dashboard**

Dual Access Dashboard

Step 2: Initiate a New Onboarding Request

- Click on **Dual Access Onboarding Request** on the right side menu.

Step 3: Fill Out Required Information

- Enter the following details:
 - Alias:** The Microsoft alias of the person to onboard.
 - PERN:** The Microsoft PERN of the person to onboard.
 - Business Justification:** Provide a detailed justification for the request (e.g., 'Working on a critical co-pilot program for XYZ to impact ABC'). Ensure the justification is descriptive for audit purposes.

Microsoft Employee Alias *

Microsoft Employee PERN (Employee ID) *

Business Justification: What project or work will this individual do with or for GitHub? *

Step 4: Set Work Duration

- The default work duration is set to **90 days**.
- If a shorter duration is needed, adjust accordingly, but note that 90 days is the maximum allowed.

Step 5: Submit the Request

- Click **OK** to submit the request.
- You will be redirected to a confirmation page showing the submission status.

Step 6: Review Submission Details

- You will arrive at a Success! Page explaining the next steps. There are two links:
 - Submit Another Record** to create another onboarding submission
 - See My Dual Access Records** to view a report showing all of your submissions and related useful information.

- Check the details of your request, including:
 - Status of the request. You will see one of two statuses:
 - Created –
 - This status means that the Automation is running to pull the Employee's data from Microsoft's HR Systems
 - Awaiting MS Employee Action
 - This status means that the data pull is complete, the next step is for the Dual Access employee to complete their onboarding tasks.
 - You may see an error status. If so, know that IT has been alerted to the error and will respond as soon as they are able to resolve it.
 - If the data pull is complete, you will see additional details like the employee's name, their manager's name, etc.
 - You will notice that their handle field is still blank. Next, the Dual Access Employee needs to take action to fill in these last details.

Next: Microsoft Worker Completes Onboarding

- The Microsoft employee will receive an email with a one-time password allowing them to log into Workday.
- They must complete their GitHub handle information as instructed, ensuring that their GitHub handle is associated with their primary email.
 - **For more information re: creating your Hubber Handle**, please jump down to this section: [Microsoft Worker Task: GitHub Handle and Email Instructions](#)
- Once they complete that task, the password will be reset and their access removed automatically.

Important Note: Failure to follow the instructions in this step is the most common cause of onboarding delays. Please advise the employee to follow the instructions carefully.

Last: IT Support Finalizes the Process

- Once the Microsoft worker submits their GitHub handle, their Workday records complete.
- A Zendesk ticket for the IT support team is automatically created, copying the GitHub Sponsor and the Dual Access Employee.
- IT Helpdesk will proceed with finalizing onboarding within 24 hours.
- At this stage, the most common blocker to a quick onboarding is errors made by the Dual Access employee in entering their handle information and ensuring that the email address is correct.
- The Sponsor and worker will receive a notification from IT when they are fully onboarded and can access their GitHub account.

Cautionary Notes

- Ensure all information is accurate to prevent delays in the onboarding process.
- The business justification must be detailed enough for potential audits.

Tips for Efficiency

- If you sponsor many Dual Access employees, keep a template for the business justification to streamline future requests.
- Regularly check the Dual Access Dashboard for updates on submitted requests.

Dual Access Onboarding: MS External Staff Path

Role of GitHub Sponsors to MS External Staff and Required Training

- The GitHub Sponsor is responsible for communicating the training requirement with the MS External Staff (contractor) and ensures that they complete the training which requires them to watch GitHub's [Security](#)
- The GitHub Sponsor is responsible for updating HR via HR Zendesk as soon as possible if work with the MS External Staff concludes prior to the stated end date or if the MS External Staff leaves Microsoft.
- Responsible for ensuring the appropriate applications are provided via Entitlements to MS External Staff
- Responsible for completing the Monthly Attestation to verify the MS External Staff still needs GitHub Systems and Tools access and if not informs HR in a timely manner.

Delegating Sponsor Tasks (for Sponsor's VP+)

- Any senior leader VP and above is able to choose a delegate to perform Dual Access administrative tasks on their behalf.
- This Delegate cannot perform any other manager tasks in Workday, their abilities are limited to the Dual Access Dashboard only.
- The Sponsor (VP+ leader) maintains responsibility for all DAE staff onboarded by their delegate, including appropriate least privileged access to GitHub systems.**

To learn how to select a delegate for your Dual Access Employee requests, please see [Dual Access Delegation SOP](#)

Onboarding App in Workday

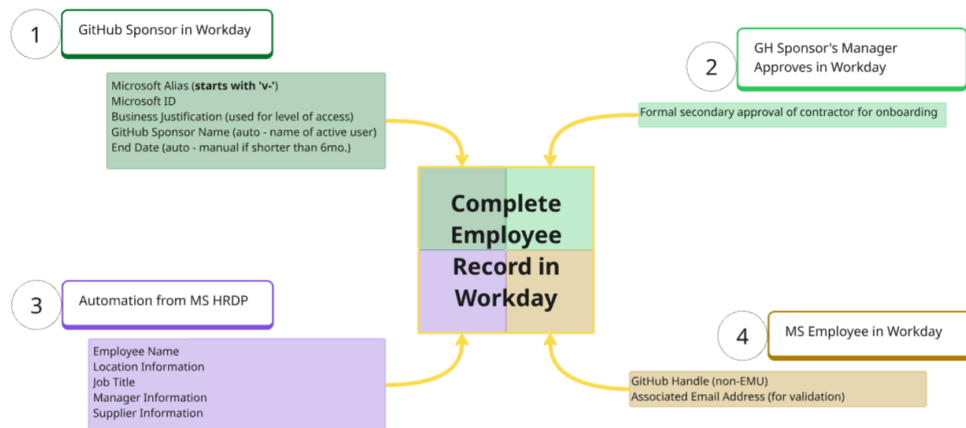

Important Notes:

- Before you can start, you will need the Microsoft Alias and PERN or TPID (Microsoft ID Number) of the Dual Access Employee you want to sponsor. You can get this information from the employee's Microsoft man
- This Guide is for onboarding Contractors at Microsoft to GitHub systems. You will know that your Dual Access employee is a contractor because their handle will begin with `v-`. You will also need to know the nar
- Due to the employee being a contractor at Microsoft rather than an FTE, we'll ask the Sponsor's manager to provide secondary confirmation of intent to onboard this employee.

MS External Staff Onboarding Data Flow

Four main components to a completed Dual Access Record in Workday:

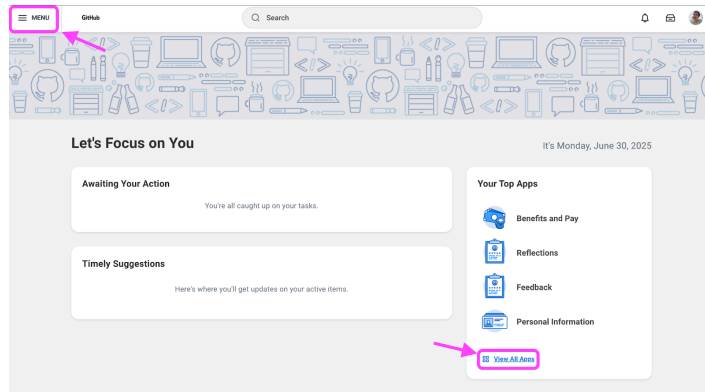

- [GitHub Sponsor in Workday](#): provides worker's MSFT Alias, ID (ie. PERN), and business justification.
- [GitHub Sponsor's Manager Approves in Workday](#): As a formal secondary approval, the GitHub Sponsor's Manager will receive an approval step in Workday.
- [Automation from MSFT HR Data Platform](#): Integration runs and brings over to Workday relevant employee data.
- [MSFT Worker in Workday](#): receives notification to login to Workday and provides GitHub Handle (non-EMU) and associated email address.
- IT Support will sync the user into GitHub systems.

GitHub Sponsor Steps:

Step 1: Access the Dual Access Dashboard In Workday

- Open Workday from Okta
- Click on **Menu** or **View All Apps**.

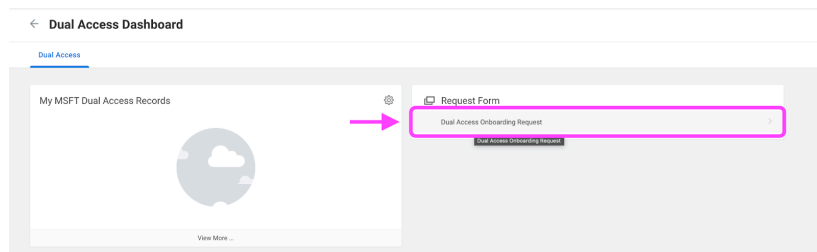

- Select **Dual Access Dashboard**

Dual Access Dashboard

Step 2: Initiate a New Onboarding Request

- Click on **Dual Access Onboarding Request** on the right side menu.

Step 3: Fill Out Required Information

- Enter the following details:
 - **Alias:** The Microsoft alias of the person to onboard.
 - **PERN:** The Microsoft PERN of the person to onboard.
 - **Business Justification:** Provide a detailed justification for the request (e.g., 'Working on a critical co-pilot program for XYZ to impact ABC'). Ensure the justification is descriptive for audit purposes.

Microsoft Employee Alias *

emdog

Microsoft Employee PERN (Employee ID) *

192384

Business Justification: What project or work will this individual do with or for GitHub? *

Will be working on a critical Co-Pilot program, for xyz to impact abc.

Step 4: Enter Supplier Information and Set Work Duration

Because this employee is a contractor, there are some additional required fields.

- Read the additional requirements and add your attestation.
- Select the employee's contract Supplier from the list provided. If the supplier is not listed, stop here and contact the People Team in Zendesk for assistance.

Request Dual Access Worker

Intro

Please fill out the below form to request GitHub access for an Microsoft Worker. Note **that only GitHub Sponsors** should request access for a Microsoft Worker, as you are the responsible party for their tenure at GitHub.

Microsoft Employee Alias *

Microsoft Employee PERN (Employee ID) *

Required Training Attestation Completion Date

*The Microsoft Employee's PERN shows that this worker is a current Microsoft vendor/MS External Staff. As the GitHub Sponsor, you must ensure that the MS External Staff completes the required [Security Training](#) and [Attestation](#) prior to you submitting this request.

For more information: [Role of GitHub Sponsors to MS External Staff and Required Training](#)

Today's Date - I attest I have Read the Above Statement *

Supplier List (please reach out to HR Zendesk if you do not see your MSFT Contractor's supplier listed) *

Business Justification: What project or work will this individual do with or for GitHub? *

Work End Date

For how long will the Microsoft Worker need access?

-This access request cannot exceed 6 months. (You are welcomed to submit a renewal after this time has passed, as needed)

OK

Cancel

- The default work duration is set to **90 days**.
- If a shorter duration is needed, adjust accordingly, but note that 90 days is the maximum allowed.

Step 5: Submit the Request

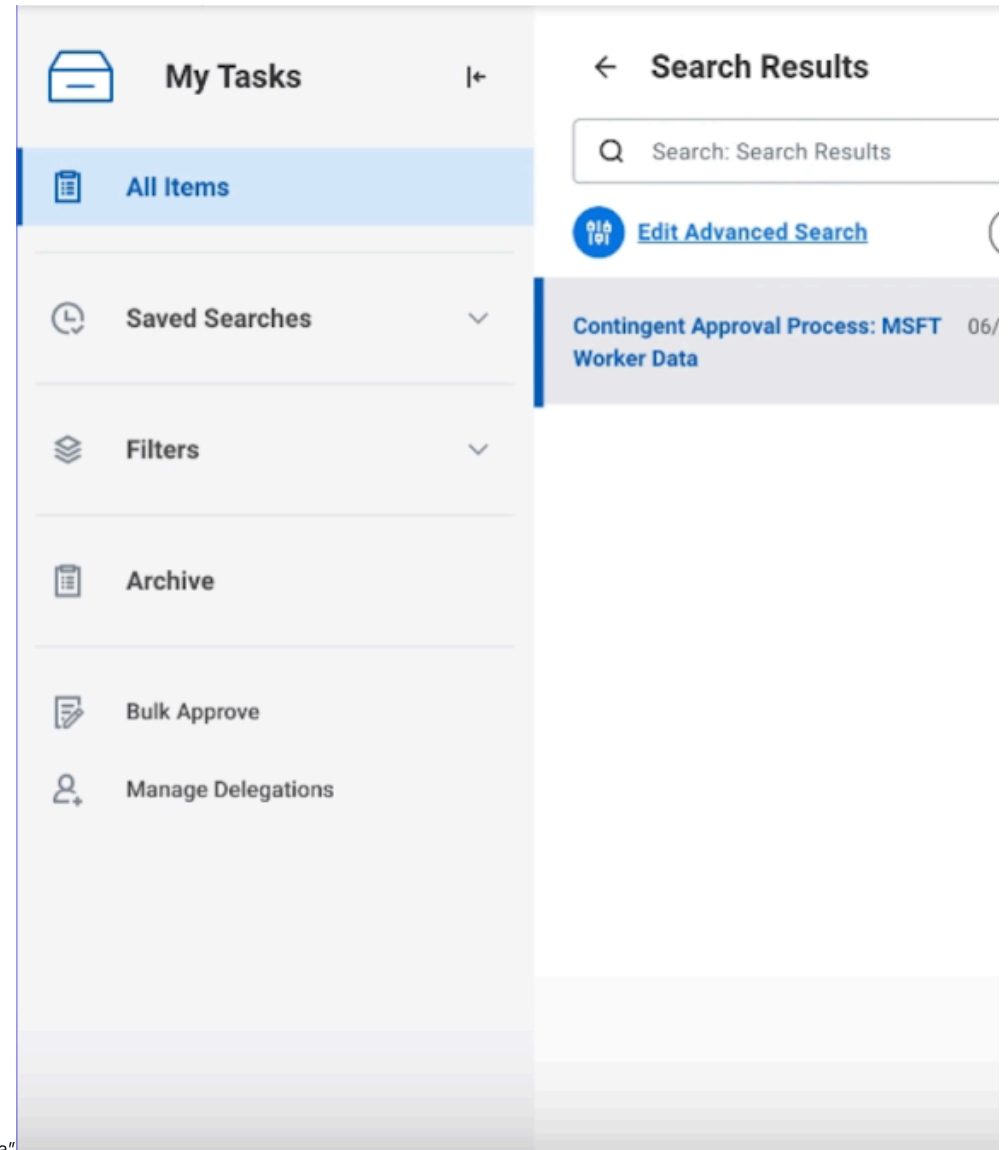

- Click **OK** to submit the request.
- You will be redirected to a confirmation page showing the submission status.

Step 6: Review Submission Details

- You will arrive at a Success! Page explaining the next steps. There are two links:
 - **Submit Another Record** to create another onboarding submission
 - **See My Dual Access Records** to view a report showing all of your submissions and related useful information.
- Check the details of your request:
 - Status of the request.
 - Created - Awaiting Action from Sponsor's Manager
 - This status means that the GitHub sponsor's manager needs to take action.
 - You may see an error status. If so, know that IT has been alerted to the error and will respond as soon as they are able to resolve it.

Secondary Approval: GitHub Sponsor's Manager Approves in Workday

- The GitHub Sponsor's manager will need to log into Workday from Okta.

- Click into your tasks, you will see a new task: "Contingent Approval Process: MSFT Worker Data"
- Review the provided employee data, add any comments you'd like to share, and either approve or deny the request.
- Now, if the sponsor was to recheck the details of your request, you'd see a new status:
 - Status of the request.
 - Hired - Process Complete
 - This status means that both the GitHub Sponsor and the skip-level have taken their required actions, the next step is for the Dual Access employee to complete their onboarding tasks.
 - You may see an error status. If so, know that IT has been alerted to the error and will respond as soon as they are able to resolve it.
 - You will notice that their handle field is still blank. Next, the Dual Access Employee needs to take action to fill in these last details.

Next: Microsoft Worker Completes Onboarding

- The Microsoft employee will receive an email with a one-time password allowing them to log into Workday.
- They must complete their GitHub handle information as instructed, ensuring that their GitHub handle is associated with their primary email.
 - **For more information re: creating your Hubber Handle**, please jump down to this section: [Microsoft Worker Task: GitHub Handle and Email Instructions](#)
- Once they complete that task, the password will be reset and their access removed automatically.

Important Note: Failure to follow the instructions in this step is the most common cause of onboarding delays. Please advise the employee to follow the instructions carefully.

Last: IT Support Finalizes the Process

- Once the Microsoft worker submits their GitHub handle, their Workday records complete.
- A Zendesk ticket for the IT support team is automatically created, copying the GitHub Sponsor and the Dual Access Employee.
- IT Helpdesk will proceed with finalizing onboarding within 24 hours.
- At this stage, the most common blocker to a quick onboarding is errors made by the Dual Access employee in entering their handle information and ensuring that the email address is correct.
- The Sponsor and worker will receive a notification from IT when they are fully onboarded and can access their GitHub account.

Cautionary Notes

- Ensure all information is accurate to prevent delays in the onboarding process.
- The business justification must be detailed enough for potential audits.

Tips for Efficiency

- If you sponsor many Dual Access employees, keep a template for the business justification to streamline future requests.
- Regularly check the Dual Access Dashboard for updates on submitted requests.
- Let your manager know that they will need to approve this onboarding Request in Workday so they'll be able to take action promptly.

HR Zendesk Ticket Onboarding Path

If you need to onboard an MS Integrated Employee or MS Embedded Manager, please follow the process:

1. Open a HRZendesk ticket by selecting: People Managers Utilization Only - My Team/Direct Reports Requests > MS Worker Assistance > **MS Worker Onboarding (HR) - or** - Work Environment and Guidelines > MS W
2. This will open a ticket form for you to fill out. Please answer all the questions as fully as possible and do not spare any details. The answers you provide in this form will help inform HR Services as to which MS Worker

- **For more information re: creating your Hubber Handle**, please jump down to this section: [Microsoft Worker Task - Enter Handle and Email](#)

Request Category *

People Managers Utilization Only - My Team/Direct Reports Requests > MS Worker Assistance >

MS Worker Onboarding (HR) ▾

Thank you for contacting us today. Before you begin, please select the reason for your request...

I am requesting system access for a Microsoft Worker who is a: *

Select an option... ▾

Work Start Date *

mm/dd/yyyy 📅

Work End Date (if available)

mm/dd/yyyy 📅

Business Justification: What project or work will this individual do with or for GitHub? ***Will this Microsoft worker need access to internal repos or organizations that we manage? ***

Select an option... ▾

Will this Microsoft worker be supporting any GH Product? *

Select an option... ▾

Are there any other GH repos, organizations, Applications or Systems that you are requesting access to?

Please provide direct links to any of the items you are requesting they have access to. If the MS Worker will need access to specific repositories within the GitHub organization, they will need to be provisioned through Entitlements. The GitHub Sponsor can do this by opening a pull request on [this file](#) to add the MS Worker to the GitHub organization. For more info & assistance please refer to [this document](#).

- If they will need access to a team in the org, open a pull request on the appropriate file [here](#).
- You may view the [documentation](#) on how to simplify this process if you expect to frequently onboard contractors into your organization
- The GitHub Sponsor can request additional application access for their MS Workers by following the instructions [here](#).

Any additional information that should be shared with HR or IT?

5. From there, IT will monitor the onboarding of the MS Worker and will flag you or others if additional information or troubleshooting is needed.

6. IT will comment once the MS Worker has been fully onboarded in this ticket. Once that is done, you are free to review/utilize the email that was sent to you regarding the GitHub Sponsor Manager responsibilities and

Microsoft Worker Task: GitHub Handle and Email Instructions

NOTE: This is the most common source of errors in onboarding, and following the instructions carefully is critical to avoid delays.

- The Microsoft worker will receive two emails,
 - Email One: a link to Workday and instructions,
 - Email Two: a one-time password to log into Workday.
- They must log into Workday using the provided password and complete their GitHub handle information as instructed.
 - Instructions:
 - Why is this needed? Your GitHub Handle will be your primary identifier across internal GitHub systems, including login credentials, Slack, and your corporate email address. This cannot be your EMU account.
 - Your existing handle: You must provide a GitHub handle that already belongs to you.
 - Need to create a handle? No problem! If you don't have an external GitHub account or prefer not to use your existing one for work, feel free to create a new handle before submitting this form. We love creating new handles.
 - What if I have worked at GitHub in the past? Be sure to provide the same GitHub handle you used during your tenure at GitHub.
 - IMPORTANT: please be sure to provide the email address associated with your GitHub account. This ensures we can integrate your identity into our systems without delay.

MSFT Employee Onboarding

Welcome to GitHub!

Your manager has requested that you receive access to GitHub systems! As a next step, please provide your existing GitHub handle / username (eg. @superjohndoe) and the email address associated with your existing account.

IMPORTANT DETAILS:

- Why is this needed? Your GitHub handle (e.g., @superjohndoe) will be your primary identifier across internal GitHub systems, including login credentials, Slack, and your corporate email address. This cannot be your personal handle.
- Your existing handle: You must provide a GitHub handle that already belongs to you.
- Need to create a new handle? No problem! If you don't have an external GitHub account or prefer not to use your existing one for work, feel free to [create](#) a new handle before submitting this form. We love creativity and innovation, as long as they're professional and appropriate for the workplace.
- What if I have worked at GitHub in the past? Be sure to provide the same GitHub handle you used during your tenure at GitHub!

GitHub Handle (see Important Details Section above) *

Primary Email Associated with Handle (IMPORTANT: please be sure to provide the email address associated with your GitHub account. This ensures we can integrate your identity into our systems without delay.) *

Powered By Workday Extend

OK

Cancel

- Once the Microsoft worker submits their GitHub handle, the password they used to login will automatically reset.
- A Zendesk ticket will be created and the IT support team will proceed with onboarding.
- If the handle or email address provided are not correct or are not properly connected, onboarding will fail. People Services will contact the Microsoft employee to update their records.

GitHub Sponsor Manager Responsibilities

The responsibilities of the GitHub Sponsor Manager as it relates to their MS Workers:

- After your employee is onboarded, you will receive an email with confirmation and instructions for what to do after your MS Worker is fully onboarded by HR and IT:
 - Processing Times:
 - We are experiencing heavy volumes of requests at this time and ask for your patience – MS Worker Onboarding can take an additional 3-4 business days after we have received all of the correct information
 - We also ask that you submit any follow-up questions into the HR Zendesk ticket and not reach out to our admins directly via Slack – this way all communications are in one place.
 - Note for GitHub Sponsor:
 - The GitHub Sponsor is responsible for updating HR via HR Zendesk as soon as possible if work with the MS Worker concludes prior to the stated end date or if the MS Worker leaves Microsoft.
 - Additional GitHub Repository Access and/or Okta application access via Entitlements:
 - If the MS Worker will need access to specific repositories within the GitHub organization, they will need to be provisioned through Entitlements. The GitHub Sponsor can do this by opening a pull request on
 - The GitHub Sponsor can request additional application access for their MS Workers by following the instructions [here](#). Please note that many tools have costs associated with each assigned license. Sponsc
 - IT Support will share the following login instructions and documentation with the Microsoft Manager and Microsoft Worker. See below for your reference.
 - Microsoft Worker Start Guide:
 - [Mac Guide](#)
 - [PC Guide](#)
 - Visit github.okta.com and sign in with the same username and password you use for github.com
 - You will need to set up a strong 2nd factor for sign-in. This could be a Yubikey, Windows Hello, touchID on a macbook (but only in certain browsers, like Chrome), etc.
 - Once you're in, you should see a Slack tile. Clicking that will get you into the GitHub Slack.
 - If you have been granted access to Azure things, then you will need to sign into Azure as YOURGITHUBHANDLE@githubazure.com (note the domain). It will bounce you through Okta for authentication. That's it! Some useful bits of info that are true for you, now, as well
 - Everyone in GitHub slack has the same handle as they have on GitHub
 - Everyone's GitHub email is GITHUBHANDLE@github.com
 - Please have the MS Worker utilize this PDF on how to accept their GitHub invite, log in to Okta and set up their 2 factor authentication:

Extending and Ending Dual Access

Regular Sponsor Attestation

Background: Sponsors are required to provide regular documented attestations of the need for continued access for every DAE that they sponsor. If attestation is not completed in time, the DAE will offboard automatic

- As of 1/13/2026, changes have been made to simplify Dual Access attestations
 - Dual Access Onboarding grants 90 days of GitHub access.
 - Quarterly Attestation resets the DAE's "contract" end date to 90 days automatically, fewer if changed manually.
 - Monthly "Contractor" attestation is no longer required for Dual Access Employees.
- If attestation is not completed by the end of that 90 day "contract," the DAE will offboard from GitHub systems and will need to repeat the onboarding process to regain systems access.

Note: Employees onboarded before 1/13/2026 may have legacy expiration dates of up to 6 months, those will be allowed to run out, and then will move to 90 day cycles.

If a DAE has completed their work and no longer needs GitHub Dual Access, the sponsor should modify their contract end date to an earlier date to offboard them as soon as access is no longer required.

Notifications

Sponsors and their delegates (if applicable) will receive notifications before their DAE contracts end dates. Notifications will arrive from Workday via email, as well as in Slack.

Note: Options for automated notifications via Teams are being investigated, but are not possible at this time.

Using the Extend/End Application

1. Access the Manager Portal OR Dual Access Dashboard

- Log in to Workday. From the menu, navigate to the Manager Portal or Dual Access Dashboard.
- Navigate to the 'Extend/End Dual Access' section.

2. Select Workers for Extension

- The chart will show all DAE with expirations in the next 90 days
 - Note: Legacy DAE (those who onboarded before January 2026) may have contract lengths of up to 6 months. They will not show in this extend/end chart until their end date is 90 days out or fewer, to prevent
 - Once eligible for attestation, the application will only extend Dual Access by 90 days. Thus, all DAE will have 90 day contracts after July 2026.
- Choose one or multiple workers from the list.
- You can select all workers if needed.

MSFT Dual Access Workers: Extensions & Contract End Dates

The grid below shows Dual Access workers with contract end dates within the next 90 days.

• **Extensions:** to extend a worker's end date, select the check box. The Proposed Contract End Date defaults to a maximum of 90 days from today, per new Security policy. You can also adjust the date manually (to less than 90 days).
 • **Early Terminations:** to end access, check the box and select the appropriate Proposed Contract End Date (from tomorrow onward). For urgent, same-day terminations, submit an HR ZD ticket.

For additional details, check out Dual Access Extensions & Contract End Date documentation.

Dual Access MSFT Contractors 3 items | 1 selected

☐ Worker	Microsoft Alias	Title	GitHub Sponsor	Current Contract End Date	Proposed Contr. Date
☒ Luna Lovegood [C]	lunalovegood	[MSFT] Senior Research Economist	Harry Potter	01/21/2026	03/18/2026
☐ Minerva McGonagall [C]	minervamcg	[MSFT] Data Scientist II	Harry Potter	02/15/2026	03/18/2026
☐ Sirius Black [C]	siriusblack	[MSFT] Staff Data Scientist	Harry Potter	02/15/2026	03/18/2026

Acknowledge: I confirm I have reviewed the Proposed Contract End Dates for Dual Access workers. I understand they will retain GitHub access until the selected dates, and it is my continued responsibility to update these dates as needed. *

☐

Step 3. Set Proposed Contract End Date

- The proposed contract end date defaults to 90 days from today, this extends access.
- Adjust the date if you want to extend for less than 90 days or end a contract sooner.

- The soonest you can end the contract is tomorrow. If you need to offboard a DAE today, please open an HR Zendesk ticket or contact Security if the need is urgent.

MSFT Dual Access Workers: Extensions & Contract End Dates

The grid below shows Dual Access workers with contract end dates within the next 90 days.

- **Extensions:** to extend a worker's end date, select the check box. The Proposed Contract End Date defaults to a maximum of 90 days from today, per new Security policy. You can also adjust the date manually (to less than 90 days).
- **Early Terminations:** to end access, check the box and select the appropriate Proposed Contract End Date (from tomorrow onward). For urgent, same-day terminations, submit an HR ZD ticket.

For additional details, check out Dual Access Extensions & Contract End Date documentation.

Dual Access MSFT Contractors: 3 items | 3 selected

ter	Microsoft Alias	Title	GitHub Sponsor	Current Contract End Date	Proposed Contract End Date
ia Lovegood [C]	ianlovegood	[MSFT] Senior Research Economist	Harry Potter	01/21/2026	03/18/2026
erva McGonagall [C]	minervamcg	[MSFT] Data Scientist II	Harry Potter		03/18/2026
us Black [C]	stiusblack	[MSFT] Staff Data Scientist	Harry Potter		02/09/2026

Acknowledge: I confirm I have reviewed the Proposed Contract End Dates for Dual Access workers. I understand they will not update these dates as needed.

☐ continued responsibility *

Step 4: Acknowledge and Confirm

- Scroll to the bottom of the form and acknowledge the extension.
- Click 'OK' to confirm the changes.
- After confirmation, you will receive a notification of the successful update.

Delegate Process (if applicable)

- If a delegate is performing the extension, they will not see the grid in the Manager Portal; they should start from the Dual Access Dashboard instead.
- The action to change the contract end date will still be logged under the GitHub sponsor's name for audit purposes. *Sponsors are responsible for actions taken by their delegates.*

Cautionary Notes

- Ensure that extensions do not exceed 90 days; otherwise, an error will occur.
- If ending a contract, make sure to select the correct date to avoid confusion. The earliest date you can choose is tomorrow.
- Double-check the proposed end dates before confirming to minimize errors.

MS Worker Offboarding Process:

If a Microsoft worker leaves Microsoft, our automated data feed will also offboard them from GitHub automatically, you should not need to offboard them.

If you need to offboard a current MS Worker from GitHub systems, please follow the below process:

Open a [HRZendesk ticket](#) by selecting: People Managers Utilization Only - My Team/Direct Reports Requests > MS Worker Assistance > MS Worker Leaving - or - Work Environment and Guidelines > MS Worker Assista

MS Worker Leaving

Thank you for contacting us today. Before you begin, please select the reason for you request...

Collaborator Leaving GitHub Full Name *

Collaborator Leaving GitHub Handle *

Effective Date of Departure? *

mm/dd/yyyy

If you have any other information you'd like to provide, please add it here
